Determination of this HAC end sequence was carried out as part of a collaboration with the Berkeley prosophila Genome Project (BBGP). The BBGP is constructing a physical map of the brosophila melanogaster genome using thirds. For further information please see http://www.fruitfly.org The BBGP lossophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0
    Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named MPCL'-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain of Drosophila DNA provided by the BDGP from the Isogenic strain wsc for the BDGP's pland EST libraries. A more detailed description of the library and how to order individual RAC clones, the entire library or filters for hybridization from the BACPAC Personer Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryoja; Metazoa; Chordata; Craniata; Veitebiata, Euteleostomi, Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

greenhouse. Whole spike with awns trimmed, white, green and yellow anther were collected and total RNA, and poly(A) RNA were prepared, a cDNA library was made, and the cDNA clones were in vivo excised to give pBluescript phagemids in the 3 Close lab (Choi, Close, Fenton) at the University of California, Riverside. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

betermination of this BAC-end sequence was carried out as part of a collaboration with the Herkely Diosophia Genome Froject (BDGF).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
